On this basis, the System's funded ratio is 58.8% as of July 1, 2011. The funded ratio is based on the actuarial value of assets of \$58.1 billion and an accrued liability of \$98.8 billion.

SECTION III - GASB NO. 25

A. Overview - GASB Statement No. 25 Disclosure

Statement Number 25 of the Governmental Accounting Standards Board established reporting standards for the annual financial reports of defined benefit pension plans. The statement requires disclosure of the "schedule of funding progress" and the "schedule of employer contributions" in the System's financial statements.

The "schedule of funding progress" shows historical trend information about the System's actuarial value of assets, the actuarial accrued liability and the unfunded actuarial accrued liability. The actuarial funded status is measured by comparing the actuarial value of assets (based on a four-year smoothed market value) with the accrued liability. For purposes of GASB Statement No. 25, the actuarial value of assets and accrued liability exclude assets in the Health Care Fund. The accrued liability is the present value of benefits accumulated to date under the System's funding method and reflects future pay increases for active employees. On this basis, the System's funded ratio is 58.8% as of July 1, 2011. The funded ratio is based on the actuarial value of assets of \$58.1 billion and an accrued liability of \$98.8 billion. Exhibit B in Section III shows the schedule of funding progress information.

The "schedule of employer contributions" shows historical trend information about the annual required contributions (ARC) of the employer and the percentage of the ARC contributed to the System. The ARC is equal to the normal cost plus amortization of the unfunded actuarial accrued liability. The maximum amortization period decreased to 30 years beginning with the ARC for the fiscal year ending June 30, 2007. Of the total employer contribution rate of 14% of payroll, 1% is allocated to health care, leaving 13% allocated to pension and survivor benefits provided by the System. The employer contributions to the System for the fiscal year ended June 30, 2011, which were based on the July 1, 2010 valuation and an infinite-year funding period, are equal to 51% of the ARC. Exhibit C in Section III shows the schedule of employer contributions.

80% of male members and 60% of female members are assumed to be married, with husbands assumed to be three years older than their spouses.

SECTION IV - ACTUARIAL ASSUMPTIONS AND METHODS

B. Actuarial Methods

1. Actuarial Cost Method

Projected benefit method with level percentage entry age normal cost (assumed payable at the middle of the year) and open-end unfunded accrued liability. Gains and losses are reflected in the accrued liability.

2. Asset Valuation Method

A four-year smoothed market value of assets that spreads the difference between the actual investment income and the expected income (based on the valuation interest rate) over a period of four years. The actuarial value shall not be less than 91% or more than 109% of market value.

3. Replacement of Retiring Members

The majority of members who retire do so effective July 1. New members who are hired after July 1 replace those members. As a result, new members are not reported on the census data. To compensate for this disparity, assumed payroll for these new members is equal to the difference between actual total System payroll for the fiscal year just ended and reported payroll for members reported on the valuation date.

4. Census and Assets

The valuation was based on members of the System as of July 1, 2011 and does not take into account future members. All census and asset data was supplied by the System.
